"VENUS BETWEEN THE CLUSTERS"

JAMES: THE BRIGHTEST PLANET...

DEAN: VENUS

JAMES: WILL GO RIGHT BETWEEN TWO GLORIOUS STAR CLUSTERS...

DEAN: THE HYADES AND PLEIADES.

(STOP & DROP)

DEAN: WE'RE FACING WEST ON WEDNESDAY APRIL 9TH AT 9:30PM. LOW IN THE SKY YOU'LL SEE SOMETHING SO BRIGHT YOU MIGHT THINK ITS A U.F.O. THAT'S ACTUALLY THE PLANET VENUS.

JAMES: VENUS WILL MOVE FROM NIGHT TO NIGHT AND HERE IS WHERE IT'LL BE ON APRIL 10TH... APRIL 11TH... APRIL 12TH... AND APRIL 13TH.

DEAN: NOW VENUS IS RIGHT BETWEEN THE TWO OPEN STAR CLUSTERS CALLED THE HYADES AND THE PLEIADES.

(STOP) GUYS IN SPACE

JAMES: THE HYADES WILL BE TO THE LEFT OF VENUS. THESE STARS ARE SPOTS IN THE FACE OF TAURUS THE BULL AND ARE ALL ABOUT 150 LIGHT YEARS AWAY.

DEAN: JUST TO THE RIGHT OF VENUS ARE THE PLEIADES OR THE SEVEN SISTERS STAR CLUSTER. FOR BEING 400 LIGHT YEARS AWAY, THESE MUST BE BIG, BRIGHT STARS.

JAMES: IF YOU HAVE BINOCULARS CHECK OUT VENUS AND THE CLUSTERS THIS WEEK AS YOU...

BOTH: KEEP LOOKING UP!
